

Designing In A Crisis

Developed by Lilo Altali
Project Manager, Learning Lab

Ground Rules

- Acknowledge all solutions are experiments.
- Recognize that you will never have complete knowledge.
- Collaborate through experimentation.
- Inspire wild, loud, and creative ideas.
- Collective impact and collective risk sharing.

1. What does your community need that you can provide right now? The more ideas the better!

2. Do you have any knowledge gaps that are preventing you from responding to those needs?

3. What for-profit, non-profit, and community partners can help you collect the most relevant and current knowledge?

4. What experiment are you and your co-designers going to test?

5. How will you collect feedback in 15 minutes on your experiment from your community?
Crowdsource feedback!
